

WHAT IS HYDROTHERAPY?

Hydrotherapy is the use of water to relieve discomfort and promote physical well-being. The term can be used to describe therapies performed more broadly in a body of water, such as a pool, or more specifically in the controlled setting of an underwater treadmill.

MAKING WAVES

Water has several innate properties with buoyancy being one of the most important. Aquatic therapy utilizes buoyancy to its maximum potential by decreasing the force placed on muscles and joints making it easier to exercise.

PERFECT FOR PETS

Hydrotherapy benefits our companion pets the same way it benefits us. Because of the support and density that water provides, it creates a comfortable setting for low impact workouts. Pets can rehab and recover from injury in ways that they can't with land-based therapies.

SETTING THE STANDARD

Oasis underwater treadmills are the gold-standard in the field of aquatic therapy with high quality, unique design and attention to detail. Beyond rehabilitation, Oasis treadmills can be used for fitness training and weight control. With two innovative models, you'll find one to fit the needs of your pet patients and practice.
